

RSA Biomedical expands to Germany

May 15th 2009

(Umeå, Sweden) To be able to meet the increasing interest for the market leading orthopedic templating system mdesk™, RSA Biomedical has opened an office in Germany. Located in Berlin, this newly opened office will allow RSA Biomedical to strengthen the presence in the middle part of Europe.

After many successful years focusing on the Northern part of Europe RSA Biomedical will now increase the presence in middle Europe. Product manager Erik Wetter is very optimistic. "Our new office together with an increased presence at exhibitions and meetings is one step towards meeting the interest we are seeing from surgeons and clinics based in these regions."

Developed by RSA Biomedical mdesk™ has evolved into a highly sophisticated yet easy-to-use system thanks to the close with some of the most highly respected orthopedic clinics and professionals in the global orthopedic community. "Our close cooperation with some of the world's most renowned surgeons gives us the advantage to be able to develop the system from the surgeons' point of view, providing functions and features to our customers that they really need" Mr Wetter adds.

About RSA Biomedical

For more than 14 years RSA Biomedical have led the global market in high-precision measurement systems for orthopedics. Since the 1990s the company have contributed to digitalization of orthopedic and radiology imaging technology. They develop their products in Sweden, the pioneering market in digital x-ray imaging systems.
